Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```
#include <stdio.h>
int floorvalue(int a[], int l, int r, int x)
{
    if(l > r)
    return -1;

    int mid = (l+r)/2;

    if (a[mid] < x)
    {
        int ans = floorvalue(a,mid+1,r,x);
        if(ans == -1)
        return a[mid];
        else
        return ans;
    }
    return floorvalue(a,l,mid-1,x);
}
int main()
{
    int n,x;
    scanf("%d", &n);
    int a[n];
    for(int i = 0; i < n; i ++)
    scanf("%d", &a[i]);
    scanf("%d", &x);
    printf("%d", floorvalue(a,0,n-1,x));
    return 0;
}
```
