Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

Reset answer

```
#include<stdio.h>
void fn(int n)
{
    int c = 0;
    if(n == 1)
    {

    }
    else
    {
        int i = 1;
        c ++;
        while(i <= n)
        {
            c ++;
            int j = 1;
            c ++;

            if(j <= n)
            {
                c ++;

                c ++;
            }
```

```
            i ++;
            c ++;
        }
        c ++;
    }
    printf("%d", c);
}

int main()
{
    int n;
    scanf("%d", &n);
    fn(n);
    return 0;
}
```
