Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>
int main()
{
    int n, c = 1;
    int i,j,k;
    scanf("%d", &n);

    i = n / 2;
    while(1)
    {
        c++;
        if (i >= n)
            break;
        j = 1;
        while(1)
        {
            c++;
            if (j >= n)
                break;
            k = 1;
            while(1)
            {
                c ++;
                if (k >= n)
                    break;
            c++;

            k = k * 2;
            }

            j = j * 2;
        }

        i ++;
    }
```

```
    printf("%d", c);
    return 0;
}
```
